Report Content

- 1. Introduction Section:
- The "business problem" to be solved by this project and who may be interest
- 2. Data Section:
- Describe Data requirements and Sources needed to solve the problem
- 3. Methodology section:
- Main component of the report Execute data processing, describe/discuss any
 exploratory data analysis and/or inferential statistical testing performed, and/o
 machine learnings used.
- 4. Results section:
- Discussion of the results and finding of answer
- 5. Discussion section:
- Discussion of observations noted and any recommendations
- 6. Conclusion section:
- Answer chosen and conclusions.

1.0 Introduction

1.1 Scenario and Background

I am currently living in Singapore, within walking distance to Downtown "Telok Ay MRT metro station". I also enjoy great venues and attractions, such as internation cuisine, entertainment and shopping. I have an offer to move to work to Manhattand I would like to move if I can find a place to live similar with similar venues.

1.2 Problem to be resolved:

How to find an apartment in Manhattan with the following conditions:

- Apartment with min 2 bedrooms
- Monthly rent not to exceed US\$7000/month
- Located within walking distance (<=1.0 mile, 1.6 km) from a subway metro stanhattan
- Venues and amenities as in my current residence.

1.3 Interested Audience

I believe the methodology, tools and strategy used in this project is relevant for a or entity considering moving to a major city in US, Europe or Asia. Europe, US or Likewise, it can be helpful approach to explore the opening of a new business. The of FourSquare data and mapping techniques combined with data analysis will help resolve the key questions arisen. Lastly, this project is a good practical case for a developing Data Science skills.

2.0 Data Section

2.1 Data Requirements

- Geodata for current residence in Singapore with venues established using Foursquare.
- List of Manhattan (MH) neighborhoods with clustered venues established via Foursquare (as in Collab). https://en.wikipedia.org/wiki/List_of_Manhattan_neighborhoods#Midtown_neighborhoods
- List of subway metro stations in Manhattan with addresses and geo data (lat.long): https://en.wikipedia.org/wiki/List_of_New_York_City_Subway_stations_in_Manhattan), (https://www.googlemaps/search/manhattan+subway+metro+stations/@40.7837297,-74.1033043,11z/data=!3m1!4b
- List of apartments for rent in Manhattan area with information on neighborhood location, address number of beds, area size, monthly rent price and complemented with geo data via Nominatim. hwww.rentmanhattan.com/index.cfm?page=search&state=results https://www.nestpick.com/searchcity=new-
- Place to work in Manhattan (Park Avenue and 53rd St) for reference

2.2 Data Sources, Data Processing and Tools used

- Singapore data and map is to be created with use of Nominatim, Foursquare and Folium mappine
- Manhattan neighborhoods were obtained from Wikipedia and organized by Neighborhoods with g via Nominatim for mapping with Folium.
- List of Subway stations was obtained via Wikipedia, NY Transit web site and Google map,
- List of apartments for rent was consolidated from web-scraping real estate sites for MH. The geol (lat,long) data was found with algorithm coding and using Nominatim.
- Folium map was the basis of mapping with various features to consolidate all data in ONE map w one can visualize all details needed to make a selection of apartment

3.0 Methodology

The Strategy to find the answer:

The strategy is based on mapping the described data in section 2.0, in order to facilitate the choice of at least two candidate places for rent. The information wi consolidated in ONE MAP where one can see the details of the apartment, the close of venues in the neighborhood and the relative location from a subway station a from work place. A measurement tool icon will also be provided. The popups on map items will display rent price, location and cluster of venues applicable.

The Tools:

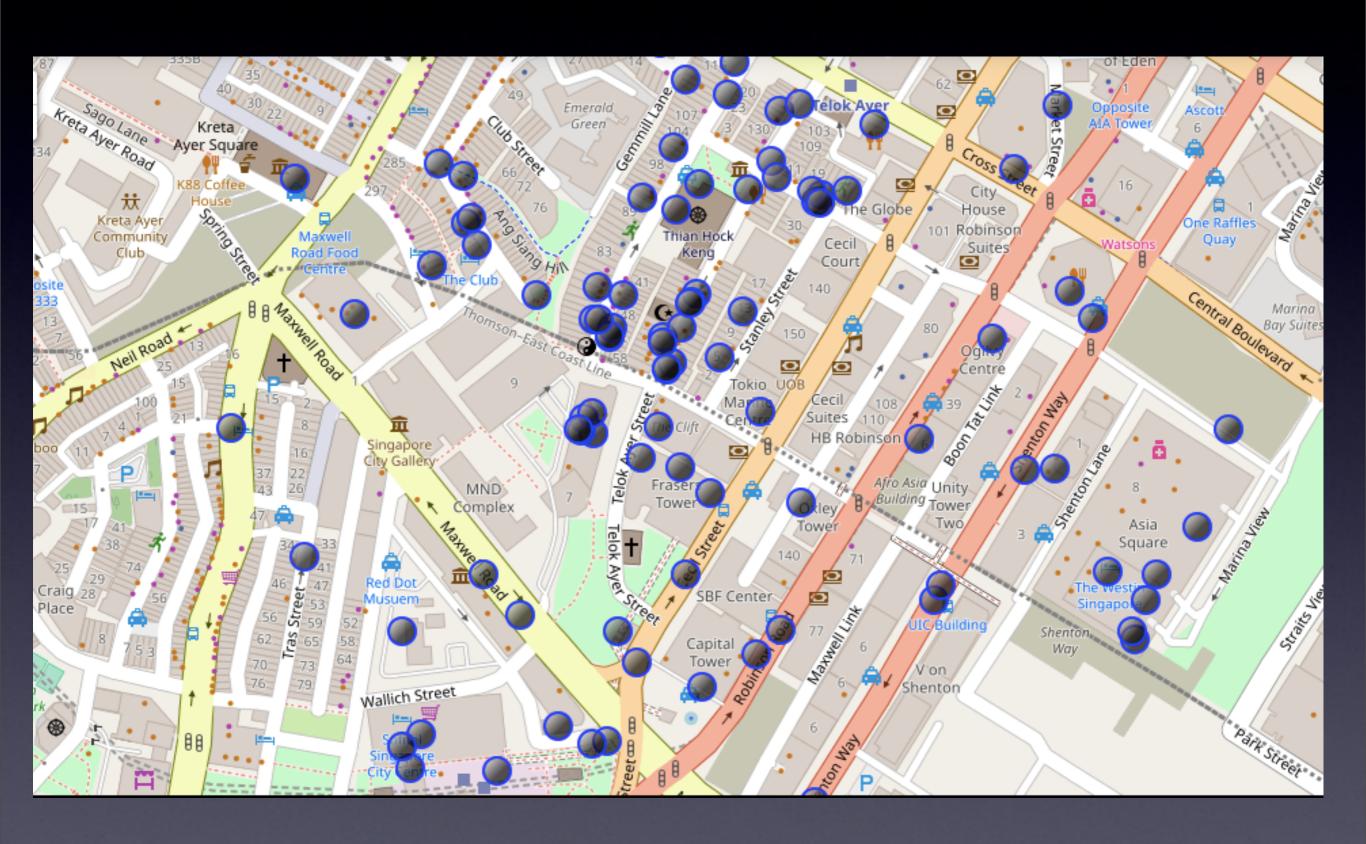

Web-scraping of sites is used to consolidate data-frame information which was saved as csv files for convenience and to simply the report. Geodata was obtain by coding a program to use Nominatim to get latitude and longitude of subway stations and also for each of (144 units) the apartments for rent listed.

Geopy_distance and Nominatim were used to establish relative distances. Seabour graphic was used for general statistics on rental data.

Maps with popups labels allow quick identification of location, price and feature, making the selection very easy

4.0 Execution and Results

Current residence Neighborhood in Singapore

Apts for rent (blue) and subway stations (red)

Selected Apartment!

The ONE consolidated map shows all information for decision:
Apartments address, price, neighborhood, cluster of venues and subway station not blue dots=apts, Red dots=Subway station, Bubbles=Cluster of Venues

Apartment Selection

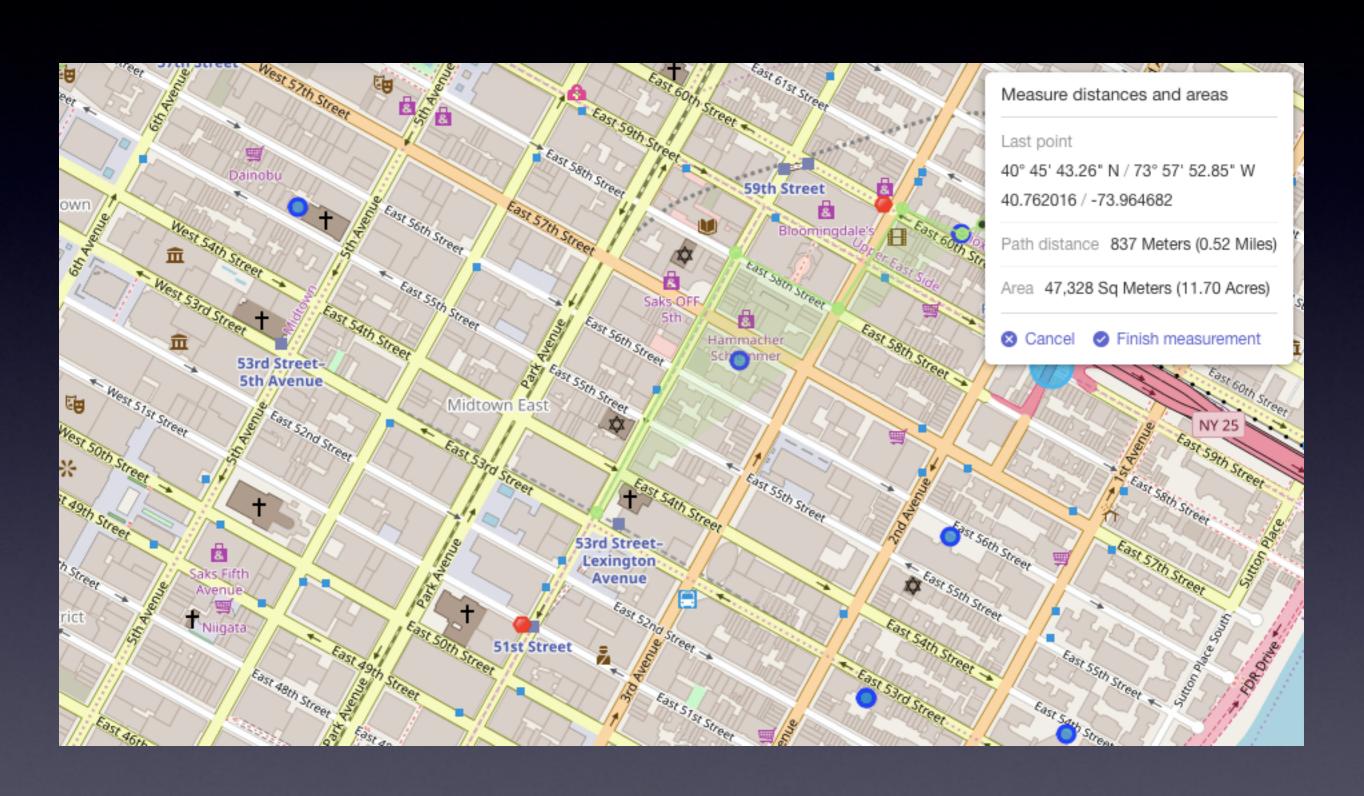

Using the "one map" above, I was able to explore all possibilities since the popular provide the information needed for a good decision.

Apartment 1 rent cost is US7500 slightly above the US7000 budget. Apt 1 is loc 400 meters from subway station at 59th Street and work place (Park Ave and 5 another 600 meters way. I can walk to work place and use subway for other pla around. Venues for this apt are as of Cluster 2 and it is located in a fine district East side of Manhattan.

Apartment 2 rent cost is US6935, just under the US7000 budget. Apt 2 is locate meters from subway station at Fulton Street, but I will have to ride the subway to work, possibly 40-60 min ride. Venues for this apt are as of Cluster 3.¶

Based on current Singapore venues, I feel that Cluster 2 type of venues is a clost resemblance to my current place. That means that APARTMENT 1 is a better chosince the extra monthly rent is worth the conveniences it provides.

I will walk to work Walk from home to work is less than 1 km!

Venus in Cluster 2 near future home

```
## kk is the cluster number to explore
kk = 2
manhattan_merged.loc[manhattan_merged['Cluster Labels'] == kk, manhattan_merged.columns[[1] + list(range(5, manhattan_merged))
```

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
0	Marble Hill	Coffee Shop	Discount Store	Yoga Studio	Steakhouse	Supplement Shop	Tennis Stadium	Shoe Store	Gym	Bank	Seafood Restaurant
1	Chinatown	Chinese Restaurant	Cocktail Bar	Dim Sum Restaurant	American Restaurant	Vietnamese Restaurant	Salon / Barbershop	Noodle House	Bakery	Bubble Tea Shop	Ice Cream Shop

5.0 Discussion

- In general, I am positively impressed with the organization, content and lab works presented the Coursera IBM Certification Course
- I feel this Capstone project presented me a gre opportunity to practice and apply the Data Scie tools and methodologies learned.
- I have created a good project that I can present example to show my potential.
- I feel I have acquired a good starting point to be a professional Data Scientist and I will continue exploring to creating examples of practical case

6.0 Conclusions

- I feel rewarded with the efforts, time and money specialistics believe this course with all the topics covered is we of appreciation.
- This project has shown me a practical application to a real situation that has impacting personal and fir impact using Data Science tools.
- The mapping with Folium is a very powerful technic consolidate information and make the analysis and thoroughly and with confidence. I would recommendate use in similar situations.
- One must keep abreast of new tools for DS that co to appear for application in several business fields.
